Replace. The question in one sentence, and why the answer is not obvious.

Replace. The agent's problem, written formally.

$$\max_{e \geq 0} ae - \frac{c}{2} e^2$$

Cite the paper, the proposition and the page.

Replace. Which assumption, in the paper's notation, and what replaces it.

Replace. The first-order condition you expect, and which result of the baseline should change and in which direction.

$$a - ce = 0 \implies e^* = \frac{a}{c}$$

Replace. Where you looked — appendices, working-paper versions, citing papers — and what you found.

Replace. What you will prove, simulate and formalize in Lean; the step most likely to fail.
